

## Information Emergo Train System® version 4

Emergo Train System (ETS) training material version 4 was released in 2018.

As a base, you choose a Pre-hospital and/or Hospital set depending on what kind of exercises you will use ETS for. In version 4, the Pre-hospital and Hospital sets are available in different sizes to suit the users need.

To the Pre-hospital/Hospital sets you connect the victim/patient banks of your choice. Most of the victim/patient banks are available in different sizes. A trigger victim bank have been developed that can be used all over the medical care chain (for example by ambulance, already in ED, or ward).

There is a continuous development of more victim banks. The newest banks are bomb/blast trauma victim bank and pediatric trauma victim bank.

If you need suggestions of what training material you would need, don't hesitate to contact us and we will be of help!
